**Abstract:** In an electric vehicle (EV), using more than one energy source often provides a safe ride without concerns about range. EVs are powered by photovoltaic (PV), battery, and ultracapacitor (UC) systems. The overall results of this arrangement are an increase in travel distance; a reduction in battery size; improved reaction, especially under overload; and an extension of battery life. Improved results allow the energy to be used efficiently, provide a comfortable ride, and require fewer energy sources. In this research, energy management between the PV system and the hybrid energy storage system (HESS), including the battery, and UC are discussed. The energy management control algorithms called Artificial Neural Network (ANN) and Aquila Optimizer Algorithm (AOA) are proposed. The proposed combined ANN–AOA approach takes full advantage of UC while limiting the battery discharge current, since it also mitigates high-speed dynamic battery charging and discharging currents. The responses' behaviors are depicted and viewed in the MATLAB simulation environment to represent load variations and various road conditions. We also discuss the management among the PV system, battery, and UC to achieve the higher speed of 91 km/h when compared with existing Modified Harmony Search (MHS) and Genetic Algorithm-based Proportional Integral Derivative (GA-PID). The outcomes of this study could aid researchers and professionals from the automotive industry as well as various third parties involved in designing, maintaining, and evaluating a variety of energy sources and storage systems, especially renewable ones.

**Keywords:** Artificial Neural Network; Aquila Optimizer Algorithm; battery; hybrid energy storage system; photo-voltaic system; ultracapacitor

## 1. Introduction

Due to technological innovations in storage, adjustable speed drives, etc., the appeal of electric vehicles (EVs) has increased recently [1,2]. The EV has fewer components than traditional fossil fuel-powered automobiles. It has many benefits, such as being extremely durable, quiet, and environmentally beneficial, among others [3]. In order to provide a consistent supply of electricity for a longer distance, more than one electrical energy source is recommended in EVs. In numerous nations, commercial solar-powered electric vehicles have been introduced for public usage [4]. They utilize the battery as a storage device to power an electric vehicle equipped with solar panels. While using multiple energy sources,

# Order Statistics of Doubly Truncated Additive Uniform Exponential Distribution

Uppu Venkata Subbarao<sup>1</sup>, K. Srinivasa Rao<sup>2</sup>, T. Narayana Rao<sup>3</sup>

<sup>1</sup>Professor, Department of sciences & Humanities N.S.Raju Institute of Technology, Visakhapatnam, India

**Abstract:** In this paper we truncated the Additive Uniform Exponential Distribution (AUED) proposed by Venkata Subbarao Uppu (2010). The probability density functions of  $r^{\text{th}}$  order Statistics,  $l^{\text{th}}$  moment of the  $r^{\text{th}}$  order Statistic, minimum, maximum order statistics, mean of the maximum and minimum order statistics, the joint density function of two order statistics of the truncated distribution were calculated and discussed in detailed.

**Keywords:** Additive Uniform Exponential Distribution, Truncation, moments, minimum order statistic, Maximum order statistic, joint density of the order Statistics, complete length of service

## I. INTRODUCTION

To introduce the phenomenon of converting an infinite range into a finite range of the random variate we utilize the concept of truncation. The range of the Additive Uniform Exponential distribution is  $(0, \infty)$ . But in many practical situations arising at places like quality control, agricultural experiments, reliability studies, etc., the variate under study will have a finite range. For example in manpower modeling the complete length of service of an employee will have a finite range. Similarly in other areas like the incontrol times of processes, productions will have minimum and maximum limits. So, for these sorts of situations the random variable under study is to be considered as doubly truncated. Hence, in this paper we develop and analyze a Doubly Truncated Additive Uniform Exponential Distribution.

We discuss the probability density function of Doubly Truncated Additive Uniform Exponential Distribution as follows:

The probability density function of additive uniform exponential distribution (AUED) is

$$g_X(x) = \frac{1}{a} [1 - e^{-\theta x}] ; 0 \leq X \leq a$$

$$= \frac{e^{-\theta x}}{a} [e^{a\theta} - 1] ; a \leq X < \infty \quad (1)$$

'a' and ' $\theta$ ' are the parameters of the distribution,  $a > 0$  and  $\theta > 0$

Consider that the range of the random variable is finite say  $(L, U)$ . Then the probability density function of the Doubly Truncated Additive Uniform Exponential Distribution (DTAUED) is

$$f_X(x) = \frac{g_X(x)}{G(U) - G(L)} \quad L \leq X \leq U \quad (2)$$

Where  $g_X(x)$  is given in equation (1)

$$\text{And } G(U) - G(L) = \int_L^a f(x) dx + \int_a^U f(x) dx = \int_L^a \frac{1}{a} [1 - e^{-\theta x}] dx + \int_a^U \frac{e^{-\theta x}}{a} [e^{a\theta} - 1] dx$$

$$\text{On simplification } G(U) - G(L) = \frac{1}{a} \left[ (a - L) + \frac{1}{\theta} (1 - e^{-L\theta} + e^{-U\theta} - e^{\theta(a-U)}) \right]$$

Let the value of  $G(U) - G(L) = A$

Therefore the probability density function of Doubly Truncated Additive Uniform Exponential distribution (DTAUED) is

$$f_X(x) = \frac{1}{A} [1 - e^{-\theta x}] ; L \leq X \leq a$$

$$= \frac{e^{-\theta x}}{A} [e^{a\theta} - 1] ; a \leq X < U \quad (3)$$

## COMMON FIXED POINTS OF GERAGHTY GENERALIZED RATIONAL TYPE WEAK CONTRACTION MAPS WITH ALTERING DISTANCE FUNCTIONS VIA GRAPH STRUCTURES

**Abstract.** In this paper we prove the existence of common fixed points of  $\beta \psi$  weak generalized rational contraction mappings with two metrics spaces endowed with a directed graph. We provided examples in support of our results.

**Keywords:** Fixed Point; directed graph; Geraghty contraction; metric space.

AMS(2010) Mathematics Subject Classification: 47H10, 54H25.

### 1. INTRODUCTION AND PRELIMINARIES

Banach contraction principle is one of the most fundamental results in fixed point theory; by extending the contractive condition and the ambient space, there are several extensions and generalizations. Jachmski [17] extended the structure of orders is replaced by the structure of Graphs on metric spaces in extended fixed point theory. The intersection of theories of fixed point findings with single and multi valued mappings is known as fixed point theory and graph theory. Many researchers [2, 3, 6, 8, 9] studied fixed point results on various spaces endowed with graphs. Fixed point results extended using Geraghty [15, 4] contractions with specific properties. Recently [7] proved the existence of fixed point theorems of auxiliary functions fractional differential equations with applications.

Note that metric fixed point and graph theory have common application environments. In the multivalued case, the authors in [3] proved a fixed point theorem for Mizoguchi–Takahashi-type contractions on a metric space endowed with a graph. For further results in this direction, we refer to [4–11]. Recently, in [12], the authors introduced a new concept of contractions called F-Khan contractions and proved a related fixed point theorem. The investigation of iterative plans for different classes of contractive and nonexpansive mappings is a focal point in measurement fixed point hypothesis. It began with crafted by Banach who demonstrated an old style hypothesis, known as the Banach contraction guideline, for the presence of a one of a kind fixed point for a withdrawal. The significance of this outcome is that it likewise gives

## ABSTRACT

Nanocomposites assembled with TiO<sub>2</sub> and graphene were synthesised under solvent free conditions. The calcinated nanocomposites have been characterized by PXRD, SEM-EDAX, HRTEM and Nitrogen adsorption-desorption techniques. Nanotitania was found to be formed in anatase phase with larger surface area (268.2 m<sup>2</sup>g<sup>-1</sup>) and with increase in graphene content, the absorbance increased towards visible region. Their biological applicability has been evaluated by examining their anti-bacterial activity against *E. coli* (ATCC29181), *S. aureus* (ATCC6538) and their anti-fungal activity against *C. albicans*, *C. rugosa* (ATCC10231) organisms. It has been observed that the biological activity has increased with increase in % graphene from 0.1 to 0.5 and showed a steady decrease with 1.0 % graphene. Compared, to the anti-fungal activity, anti-bacterial activity was identified to be major in the present studies.

**Keywords:** Nanotitania; Graphene; Anti-bacterial activity; Anti-fungal activity.

## 1. INTRODUCTION

Microorganism contamination is a frequent biological issue in many areas such as hospitals, medical equipment's and devices, food storage, sanitation, water purification and storage systems [1,2]. Selecting an appropriate removal technique of these microorganisms from the area of usage has become inevitable. One of the efficient materials for the purpose is a Photocatalyst applied under optimized conditions [3]. TiO<sub>2</sub>, ZnO, Fe<sub>2</sub>O<sub>3</sub>, WO<sub>3</sub>, NiO are few such photocatalysts, with high stability, low cost and vast applicability, have effective anti-microbial activity [4,5]. A wide spectrum of viruses, bacteria, fungi, algae can be removed with these semiconducting materials and TiO<sub>2</sub> was found to be a competent and economical photocatalyst in the application [5]. The anti-microbial activity was more efficiently performed with modified nanotitania materials viz., Ag doped TiO<sub>2</sub> [6], B doped TiO<sub>2</sub> [7], Nano TiO<sub>2</sub>-NiFe<sub>2</sub>O<sub>4</sub> [8] etc. Recently, graphene oxide (GO), the oxygenated derivative of graphene, has been used as anti-bactericidal agent to remove multi-drug resistant bacteria [9]. Along with these reports, several other researchers have produced excellent results on the anti-microbial activity with nanomaterials [10-14]. The main objective of this paper is to evaluate the anti-microbial activity of the TiO<sub>2</sub> nanocomposites assembled with graphene towards the removal of microorganisms like *C.albicans*, *C.rugosa* and gram-negative *E. coli*, gram-positive *S. aureus*. To elaborate the studies, the weight of graphene was varied as x % (x= 0.1, 0.5, 1.0) with a constant weight of titania in the nanocomposites. The same was compared with the separately synthesized nanotitania particles without graphene.

## 2. EXPERIMENTAL

### 2.1. Materials

Titanium tetrachloride (TiCl<sub>4</sub>), graphite powder, potassium permanganate (KMnO<sub>4</sub>), phosphoric acid (H<sub>3</sub>PO<sub>4</sub>), sulphuric acid (H<sub>2</sub>SO<sub>4</sub>), hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>) was procured with AR grade quality from SD-Fine analytical

# On Some Coupled Fixed Point Theorems for Mixed Monotone Mappings in P – Metric Spaces

## 1. Introduction

The theory of fixed points has been an area of interest for many researchers and it was first studied by a French mathematician *Poincare* in 1886. The fixed point theory is known for its tremendous applications in various fields like Differential Equations, Dynamical Systems, Game theory, Economics, etc. This research article mainly focuses on coupled fixed point theorems. For our work, we consider a partially ordered metric space which was introduced in 1994 by *Matthews* in his research article [3]. In 1987, Guo and Lakshmikantham [1] introduced the concept of a coupled fixed point. In 2006, Bhaskar and Lakshmikantham [2] introduced the concept of a mixed monotone property for the first time and investigated some coupled fixed point theorems for mappings. As a result, many authors obtained many coupled fixed point and coupled coincidence theorems. In 1994, Matthews [8] laid out the idea of a Fractional measurement spaces and demonstrated normal fixed point hypotheses for viable guides in fractional measurement spaces. Additionally Matthews created the Banach contraction rule is legitimate in fractional measurement space and it ought to be applied in program confirmation. Ćirić [9] gave the Semi contractions in metric spaces and laid out Banach contraction standard and numerous other fixed point hypotheses in measurement spaces. It is, as a matter of fact

# Detection of Unauthorized Access Points Based on Machine Learning Techniques

Challa Narasimham, Velamuri Manasa, Sujatha Karimisetty,  
N. Viswanadha Reddy, and Sudhanshu Maurya

**Abstract** Wireless networks were widely used, but they were actually a threat. Represents Recognized as a wireless AP (access point). In particular, unauthorized APs used by businesses, military installations, and government agencies can be exposed to hacking attacks. Therefore, to protect your information, it is significant to identify unauthorized APs. This paper addresses round-trip time (RTT) values as records to identify allowed and unallowed APs in a wireless integrated atmosphere. Machine learning techniques such as potential Dirichlet mapping, k nearest neighbors, naive bays, support vector machines, bagging, adapter boosting, gradient boosting machines, random forests, additional trees, and gradient descent techniques are employed to resolve these issues. Gradient Boosting algorithm is used for protection and identification. This is developed and tested on data set. Experimental results show that it offers the highest accuracy.

**Keywords** Hacking attacks · Gradient boosting algorithm · Machine learning

## 1 Introduction

Because of quick growth of devices employing cellular networks, it is difficult to locate places without wireless internet in present scenario. Wireless internet is currently present in corporation, coffee shop, armed forces establishments and public organizations. Wireless internet is accessed by numerous unspecified users, creating it tough to find everyone. And even when binding similar devices to hotspot that use legal wireless internet, discovery is problematic until this is observed with deep sense [1].

### ABSTRACT

Spinal abnormalities are commonly occurring disorders that are caused by injuries, osteoporosis (benign) and neoplastic infiltration (malignant). Patients with one of the listed malignancies must undergo therapy as soon as possible to prevent the progress of the disease and to avoid further bone damage to preserve a better quality of life. Classification of patients into low or high-risk groups is an important step in diagnosing a disorder, which led biomedical and bioinformatics research teams to investigate the usage of machine learning (ML) technologies. In this paper, ML techniques are adapted to a public lumbar spine dataset to detect vertebral fractures. First, the dataset was preprocessed by using the contour-based hybrid median filter with histogram equalization. Then the Mask LSTM-based R.O.I. segmentation techniques are applied to segment the spinal images. Finally, the suggested stacked Adaptive Enhanced AdaBoost (AE-AdB) gets trained on whole images to enhance the accuracy of the data classification. Results of the experiment show that the attained accuracy (97.86%) of the AE-AdB classifier was significantly higher than that of the other classifiers, namely Convolution Neural Network (CNN) (74%) and Extreme Gradient Boosting Algorithm (XGBoost) (84%).

### 1. Introduction

The primary support system of the human body is the spine, or vertebral column. Different spinal disorders or abnormalities include vertebral fractures (V.F.s), scoliosis, lordosis, spinal tumors, spinal trauma, and spondylolisthesis. V.F.s are general and critical, which might occur in 30–50 % of people over 50 % and create minor or aggressive effects. The most significant and common osteoporotic fractures are V.F. s [1]. Osteoporosis is defined as a bone disorder that increases the risk of fracture in people. Chronic back discomfort, functional loss, and numerous organ dysfunctions, such as severe myocardial infarction, obstructive pulmonary disease, gastroesophageal reflux disorders, and congestive heart failure, are some of the symptoms of V.F. In adverse cases, V.F.s are associated with decreased life quality and, in some cases, might result in mortality [2].

Benign fractures can be cured with a good outcome if proper treatments are given. Treatments for V.F.s are confirmed based on their causes. Osteoporotic vertebral fractures (O.V.F.s) are a major medical concern because they are frequently undiagnosed and related to subsequent fractures, tumor growth, and increased mortality risk. Hence, they must be diagnosed at an early stage to facilitate treatment and reduce the risk to patients [3]. But the lack of proper symptoms and under-reporting of O.V.F.s from C.T. scans by clinicians led to the use of newer computer-aided approaches for detecting O.V.F.s.

Recent advancements in machine learning approaches have paved the way for their application in the medical diagnosis field. For this reason, ML techniques have been suggested as a promising solution in the medical field because of their capacity to detect disease patterns with higher accuracy compared to that of human experts [4]. In the last few years, various ML algorithms have been developed for the

### **Abstract**

A review has been presented in this paper on “Methods developed to detect COVID-19 patient” and Bibliometric survey presented based on the methods developed to detect COVID-19 patients. The first case of Corona virus disease recorded in China in the month of December 2019. Within few days, it spreads all over the world. Most of the researchers still working on methodologies to detect patients who are suffering from this disease using X- ray images and CT images by collecting data from various hospital and standard data sets. To review the papers published on the COVID-19, a search is made using key ‘COVID-19’ in Scopus database and found 167,008 documents published in the years 2020 and 2021. To review the performance of the methods/ Techniques developed, the Scopus database is used for collecting the papers. The number of documents published to detect COVID-19 patients are 1802 and Bibliometric analysis is conducted on these documents. Out of these documents, paper published on detecting COVID-19 patients using X-ray images having minimum number of citations 11 are used to compare the performance of the method. The statistical analysis and Network analysis is also carried out using VOSviewer1.6.16 software. The Source for all tables and figures is [www.scopus.com](http://www.scopus.com). The data is assessed on 14<sup>th</sup>July, 2021.

### **Introduction**

In Wuhan, a series of pneumonia cases of unknown cause emerged in December 2019[1]. The disease which is spread swiftly in chain and more than 210 countries in the late December 2019 and early of 2020 is named as Coronavirus disease 2019 (COVID-19). The COVID-19 patients do not have common symptoms.

## A Bibliometric Survey on Tsetlin

**Abstract:** In this paper, Bibliometric survey has been carried out on Tsetlin. Tsetlin- an automaton that has learning capability developed M L Tsetlin in 1960s. Recently, Tsetline machines are developed and used in game theory, and may be used in many more upcoming technologies. Recent studies proved that the classification results obtained using Tsetlin machines are competitive compared with Decision tree, Random Forest, Neural Networks, Support Vector Machine, Naïve Bayes Classifier and Logistic regression. When the search is made using key ‘Tsetlin’ in Scopus database, it shows 372 documents as a result. Scopus database is the most trusted database, so most of the researchers are publishing papers in journals cited by Scopus database. Hence, Scopus database is considered to conduct bibliometric analysis in this paper. The statistical analysis is carried out source wise, year wise, area wise, Country wise, University wise and author wise. Network analysis is also carried out using VOSviewer1.6.16 software. The Source for all tables and figures is [www.scopus.com](http://www.scopus.com). The data is assessed on 24<sup>th</sup>July, 2021.

**Key Words:** Automata, Boolean Algebra, Classification, Deep Learning, Game Theory, Lattice Theory, Neural Networks, Support Vector Machine, Tsetlin, Tsetlin Machine.

### ABSTRACT

The clustering of data series was already demonstrated to provide helpful information in several fields. Initial data for the period is divided into sub-clusters Recorded in the data resemblance. The grouping of data series takes 3 categories, based on which users operate in frequencies or programming interfaces on original data explicitly or implicitly with the characteristics derived from physical information or through a framework based on raw material. The bases of series data grouping are provided. The conditions for the evaluation of the outcomes of grouping are multi-purpose time constant frequently employed in dataset grouping research. A clustering method splits data into different groups so that the resemblance between organisations is better. K-means++ offers an excellent convergence rate compared to other methods. To distinguish the correlation between items the maximum distance is employed. Distance measure metrics are frequently utilized with most methods by many academics. Genetic algorithm for the resolution of cluster issues is worldwide optimization technologies in recent times. The much more prevalent partitioning strategies of large volumes of data are K-Median & K-Median methods. This analysis is focusing on the multiple distance measures, such as Euclidean, Public Square and Shebyshev, hybrid K-means++ and PSO clubs techniques. Comparison to orgorganization-based methods reveals an excellent classification result compared to the other methods with the K++ PSO method utilizing the Chebyshev distance measure.

## 1. Introduction

Digitally, there was a rapid expansion of IT and a vast volume of data acquired from many sectors. The corporate expert's more hard role is to turn enormous measures of data housed in structured data into technical knowledge. This job is accomplished via Knowledge Discovery in Databases (KDD). Data mining (Aghdasi, et al., 2014) is component of the Process model. In order to find heretofore unknown, meaningful patterns and connections in huge

data sets, big data refers to the application of data analytic tools. One of the big data mining operations is grouping (Sethi & Mishra, 2013).

The study of clusters is the act of aggregating a number of observations just so the sustainability describes within that group are much more comparable as well as the data sets of other groupings are distinct. Unchecked approach is done cluster, since groupings are not previously known. In a data collection (Danesh, et al., 2011) the objective of grouping is to find thick and empty areas. Clusters is utilized in various fields such as system modelling, model analysis, machine intelligence, image classification, image recognition, genomics, data recovery and the finding of data. Thus, it is a significant issue of study in several fields.

Data clustering may be widely grouped into hierarchy techniques, partial approaches, cluster analysis techniques; location is strategic techniques and modelling classification algorithms.
